

Steel frames

TIMBER SUPERSTRUCTURES THE TRADITIONAL WAY
Höglunds Flak- now OP höglunds- has a long tradition of building timber superstructures.

OUR STANDARD SOLUTIONS GIVE OUR CUSTOMERS A WEALTH OF CHOICE

Many of the superstructures we have constructed over the years for our customers have become standard for us. Several of these standard solutions can be combined, thereby providing customers with the opportunity of a tailor-made construction that suits their individual requirements.

STEEL FRAME

Our classic, high-quality, steel frames have headboards made of aluminium or steel/aluminium. It is also possible for the hydraulic tank to be mounted on the headboard.

CRANE INSTALLATION

Our reliable methods using crane brackets, Toppluss or fixed mounting mean that we can install cranes regardless of the frame type.

SERVICE

The service organization we have developed makes us unique in the market. Our service departments are situated in Säfte and Malmköping, as well as at the OP Group's locations in Sweden.

We also have call-out service vehicles, allowing us to maintain a high level of service. Together with well-stocked spare parts stores, it means that our customers can be sure that they will receive help quickly and efficiently.
